Bioflavidex

SUGGESTED USE

- ▶ Horses suffering, or recovering from, viral or bacterial infections of the respiratory tract
- ▶ Horses exposed to pollen, dust or mould spores
- ▶ In horses that suffer from Exercise Induced Pulmonary Haemorrhage (EIPH)
- ▶ Horses undertaking strenuous exercise

HOW TO USE

Give daily in feed. Give a loading (double) dose for first 7 days.

Horses & ponies > 300kg

Loading dose (first 7 days):

50g (2 scoops)

Maintenance: 25g (1 scoop)

Horses & ponies < 300kg

Loading dose (first 7 days):

25g (1 scoop)

Maintenance: 12.5g (1/2 scoop)

(Each scoop contains approx. 25g)

For best results begin supplementation 4-6 weeks before increasing exercise intensity and continue to use throughout horse's competitive career.

KEY PRODUCT FEATURES

- ▶ **Hesperidin** is a citrus bioflavonoid which has been found to have powerful antioxidant effects and positive effects on the vascular system – by reducing inflammation, increasing circulation and strengthening capillaries.
- ▶ **Vitamin E** is included for its powerful antioxidant effects to help promote healthy lung function.
- ▶ Grapeseed extract contains the natural polyphenol **Resveratrol**, which provides antioxidant and anti-inflammatory effects.

DID YOU KNOW?

Pollen, mould spores and dust can all contribute to compromise of the respiratory system and impact lung health. Even horses that don't display outward signs of respiratory issues have been found to have airway inflammation. Fed regularly, **Bioflavidex** can help reduce airway inflammation and improve lung function.

*The **Bioflavidex** formulation has recently been concentrated so that one bucket lasts twice as long.
