# Betapulmin

## SUGGESTED USE

- ▶ Before travelling
- ▶ Throughout the competition season
- ▶ During sales preparation / at the sales complex
- ▶ To help manage seasonal respiratory issues
- ▶ Before, during and after stressful events
- ▶ Whenever there is an increased risk of respiratory issues (e.g., viral or bacterial infection, or exercise induced pulmonary haemorrhage or EIPH)

## HOW TO USE

Give daily in feed

**Horses & ponies > 300kg:**  
30g (1 scoop)

**Horses & ponies < 300kg:**  
15g (½ scoop)

## AVAILABLE SIZES

SUITABLE FOR ALL HORSES

LASTS 30 DAYS

## KEY PRODUCT FEATURES

- ▶ **Beta-glucans** enhance the body's natural defences against infection. Proven to boost immune response under stress or exposure to airborne irritants. Research shows Beta-glucan supplementation can:
  - a. Improve lung health by reducing severity of respiratory issues
  - b. Strengthen immune function and aid recovery from infections
  - c. Enhance vaccine responses and overall immune resilience
- ▶ **Vitamins C & E** are powerful antioxidants that protect immune cells from oxidative damage and are essential for fighting infection.
- ▶ **Omega-3 (DHA & EPA)** will modulate inflammation, helping to clear airways, reduce mucus production, and support optimal lung function.

## DID YOU KNOW?

Up to 80% of horses across all disciplines experience airway inflammation or respiratory challenges during their careers. **Betapulmin** combines Beta-glucans, antioxidants, and Omega-3s to reinforce immune defences and promote optimal respiratory function.
